---

The Pitt Community College House Project is an annual project designed to provide students the opportunity to actively participate in the construction of an energy-efficient house. The goal of this project is to provide appropriate knowledge and extensive hands-on experience for students in the various construction trades offered by Pitt Community College. Each phase of the project is inspected and meets state building codes. The program has been so well received and has grown so much that this year, two houses are again being constructed on campus. The houses will sold by public auction upon completion.
**General Information**

The houses are located on the campus of Pitt Community College on State Highway 11, Greenville, North Carolina.

The houses meet the Greenville Utilities Commission E-300 Program requirements for energy efficient homes.

The houses may be seen by appointment. Please call Bill Hill at 252-493-7282.
